EDUCATION

Rensselaer Polytechnic Institute | Master of Science in Computer Science – GPA: 3.73/4.0
Focus in Artificial Intelligence and Systems/Software

Troy, NY

Expected December 2026

Rensselaer Polytechnic Institute | Bachelor of Science in Computer Science - GPA: 3.95/4.0

Graduated December 2025

PROFESSIONAL EXPERIENCE

General Dynamics Mission Systems

Pittsfield, MA

Guidance Software Engineering Intern

June 2025 - Present

- Design and create a distributed C++ publisher-subscriber system with 5 nodes and <20 ms latency for real-time data distribution
- Develop a C++ socket-based power supply simulator for hardware-free DDS service code testing, eliminating a testing bottleneck
- Extend IaC YAML deployment automation for engineering and customer teams to deploy a fully configured test equipment system with running VMs and containers, eliminating configuration drift and enabling quick environment resets for experiments
- Debug and extend Python keyword libraries underlying Robot Framework DDS test automation, advancing prior C++ DDS work
- Configure operating systems and manage 4+ virtual machines on a test equipment lab server to ensure operational readiness

Consolidated Edison Company of New York, Inc.

New York City, NY

Systems Analyst Co-op

September 2024 – April 2025

- Collaborated with 4+ projects simultaneously to design/develop automated test scripts for the Maximo Test Automation Project
- Resolved issues in legacy test scripts written in SpecFlow Gherkin and C# to ensure reliable execution during scheduled runs
- Established a Selenium WebDriver to enable cross-browser testing for consistent test execution and reliability across platforms
- Implemented CI/CD pipelines in Azure DevOps to streamline software development and testing processes for the team

Consolidated Edison Company of New York, Inc.

New York City, NY

IT Intern

June 2024 – August 2024

- Managed resources for the go-live of the Maximo CWorx project, communicating with 15+ distinct teams for timely execution
- Tracked IT tickets from project developers through Azure DevOps to maintain communication between teams across departments

RPI Computer Science Department

Troy, NY

Undergraduate Data Structures Teaching Assistant

Jan 2024 – May 2024

- Taught key topics, including binary trees, heaps, hash maps, and basic algorithms, emphasizing practical implementation in C++
- Led weekly office hours and lab sessions to provide guidance to over 30 students to strengthen understanding of course material
- Reviewed student progress with professors to give insight into potential changes needed to improve upon student learning

PROJECT EXPERIENCE

Rensselaer Center for Open Source (RCOS) CartX

2023 – Present

- Project lead for developing a cost-minimizing shopping app built in React and Node.js, that saves users 23% in grocery costs
- Implemented semantic search via vectorization, generating item embeddings with a pretrained ML model, embedding search queries, and computing vector distance to surface results matching user intent, improving relevance by approximately 70%
- Implemented web scraping routes using Selenium to extract 80,000+ items from 4+ major retail chains to store in MongoDB
- Utilized Google Maps and Bing Maps API to gather data about local stores, returning their location and distance instantaneously
- Assigned tasks that aligned with their skill set to optimize productivity, fostering open communication in the team

EcoVISION - HackRPI Best AI Hack Winning Project

November 2024

- Built a React-based web application with a Flask backend to utilize AI to identify recyclables from images and videos of debris
- Achieved 95% classification accuracy using OpenAI to provide actionable insights for waste sorting and sustainability practices
- Integrated OpenCV and OpenAI to analyze conveyor belts, improving sorting efficiency by 20% in simulated environments

FinanceHacks - SHPE/NSBE Hackathon 1st Place Project

February 2024

- Developed a React-based platform that uses the Google Gemini API to provide financial advising and promote financial literacy
- Integrated Google Gemini to create a chatbot and for data collection on opening accounts, credit cards, and loan interest rates
- Leveraged the Bing Maps API to locate 10+ nearby banks, ensuring local and relevant information is provided to users

TECHNICAL SKILLS

Programming Languages: Python (NumPy, Matplotlib), C++, C, C#, Java, JavaScript, TypeScript, PHP, HTML/CSS, Bash
Frameworks / Tools: SQL, Node.js, Git, Podman/Docker, YAML, Distributed Systems, Robot, React.js, Azure DevOps, Linux, Jira
AI / LLM Tools: OpenAI, Claude, Google Gemini (Developer APIs), Prompt Engineering, OpenCV (vision-based integration)

AWARDS & ACTIVITIES

Awards: Rensselaer Leadership Scholarship, 1st Place Winner of NSBE-SHPE Hackathon, High School Valedictorian

Extracurricular/Volunteering: Pittsfield Food Pantry, High School Courtyard Cleanup, Intramural Frisbee, Art Club
